

## **SenSage Data Warehouse Software Included in New HP Compliance Log Warehouse Appliance**

SAN FRANCISCO – June 19, 2007 – Enterprise software leader SenSage, Inc. today announced that it will provide SenSage event data management software for the new HP Compliance Log Warehouse appliance.

The HP Compliance Log Warehouse, part of the HP Secure Advantage portfolio of solutions and services, was introduced today at the HP Technology Forum event in Las Vegas. It is a general-purpose, high-performance appliance that performs high-speed collection and analysis of log data to automate compliance reporting for many industry and government standards, including PCI, SOX, FISMA, NISPOM and FFIEC.

This news follows the May 2007 announcement that SenSage event data management software is included in the HP Trusted Compliance Solution for Energy (HP TCS-e) appliance. The HP TCS-e is a specialized security appliance that combines SenSage event data management software with HP's FIPS 140-2 Level 4-certified hardware-based security subsystem, compliance automation software, and storage technology.

“The need for log management to support security and compliance has become a mainstream requirement for businesses,” said Jim Pflaging, president and CEO of SenSage. “We are pleased to work with HP to bring to market the ideal solution that combines SenSage's high-performance software with the industry's best security and server technologies, quality and support.”

Event data records – also known as log data – are created whenever time-stamped transactions occur in the enterprise IT infrastructure. The retention of log data and the ability for corporations to quickly inspect these records have become vital to businesses, not only for meeting audit readiness and regulatory compliance, but in detecting suspicious activity, insider threats and other security breaches.

SenSage's software solutions are standards-based and have been substantially optimized for HP hardware and storage products, resulting in a best-of-breed SIEM appliance offering. Its flexible, componentized architecture makes it easy for solution providers to customize for specific market needs at a fraction of the cost of general-purpose data warehouse software. SenSage's approach blends a high degree of performance with an array of administrative, management, analytics and reporting capabilities to meet the most stringent of compliance and regulatory requirements.

SenSage software is well-suited to meet customer demands in highly regulated, transaction-intensive industries, including energy, finance, healthcare and government.
