

SenSage Joins McAfee Security Innovation Alliance

Customers To Benefit from Integrated Security Capabilities That Enable Easy Cross-platform Security Investigation Queries and Compliance Reporting

RSA 2008 (Booth 2525), SAN FRANCISCO – APRIL 7, 2008 – Enterprise software leader SenSage, Inc. today announced that it has joined the McAfee Security Innovation Alliance (SIA) partner program. Under the SIA program, SenSage will integrate its event data warehouse (EDW) solution with McAfee's ePolicy Orchestrator (ePO™), enabling customers to extend the scope of their security strategy across both companies' platforms to respond to evolving corporate requirements for security, compliance and investigations.

"We are pleased to add SenSage to the McAfee Security Innovation Alliance," said Joe Gottlieb, vice president of corporate strategy and technology alliances, McAfee. "Our customers face growing challenges to secure their networks and maintain compliance, and are looking to integrate enterprise log management with their McAfee solutions. SenSage's log data warehouse solution addresses the need to collect, store and analyze large volumes of log data from a broad range of data sources found in today's enterprise."

McAfee ePO is the first and only platform that lets enterprises and governments centrally manage security and compliance products from multiple vendors, offering unprecedented cost savings and return on investment. With more than 35,000 customers and managing more than 55 million PCs and servers, this unique platform is helping SIA partners to extend their reach and create complementary functionality.

"Given the market demand for more tightly integrated security solutions, SenSage is adding support for all McAfee products that can be accessed through ePO to enable seamless compliance reporting and in-depth investigations within a single, intuitive dashboard," said Dan Barahona, vice president of business development, SenSage. "The integration with ePO will give McAfee customers a greater view into security incidents and the ability to take action to contain and mitigate threats."

SenSage's event data warehouse includes out-of-the-box support for logs from a growing list of McAfee products and it integrates reporting with the McAfee ePO console. With SenSage, organizations can centralize and analyze McAfee log data with other sources to provide enhanced threat detection and comprehensive compliance reporting. SenSage stores years of log data in a single, 100 percent online data repository, enabling fast reports and pinpoint-accurate investigations against terabytes of data.

SenSage will be demonstrating the integration with McAfee at booth 1554 at the RSA Conference in San Francisco, April 7-10.
